PROFESSIONAL SUMMARY

Cybersecurity graduate and R&D professional with hands-on experience spanning solutions development, team leadership, and customer support. Certified by globally recognized organizations, I excel in identifying vulnerabilities, analyzing threats, and securing systems, while also driving process improvement, cost savings, and internal tooling initiatives within industrial R&D environments — including leading a data audit across roughly 5 million billing records and building internal tools used company-wide. I've also delivered freelance full-stack solutions for external clients and developed open-source security tools such as Caeruleum (forensic analysis) and Vigil (network traffic monitoring). I thrive in high-pressure environments and am committed to digital defense and impactful engineering.

WORK EXPERIENCE

Detroit Axle — R&D — Acting Team Lead (previously Solutions Development)

Mar 2026 To Present

- Joined as a Solutions Developer in the R&D department in March 2026 and was subsequently promoted to Acting Team Lead.
- Audited carrier billing data for FedEx across datasets of approximately 5 million rows, identifying discrepancies that saved the company thousands of dollars.
- Led development of an internal, cross-departmental tool used company-wide, supporting functions such as break/time tracking, customer support workflows, and detailed sales visibility, among numerous other use cases.
- Traveled to Shanghai, China for 45 days to audit the Logistics department and develop tools for the China team to audit shipping containers and other logistics operations, resulting in departmental downsizing and improved operational flow and efficiency.
- Collaborated with third-party IT vendors to integrate and support internal systems and tooling.
- Partnered with the listing team to develop new product listings and translate existing listings to support expansion into a new marketplace in Mexico.
- Developed a dedicated tool for the QA team featuring multi-factor authentication (MFA) and implemented security hardening measures across all internal tools developed.
- Supported the opening of Detroit Axle's Canadian and Mexico branches.
- Extended the FAST platform to develop a tool that flags potential scams using transaction data from Braintree, working closely with the payment verification team.

National Cyber Security Center Jordan (NCSCJO) — Cybersecurity Intern

Feb 2025 To Present

- Performed penetration testing and supported blue team defense, identifying vulnerabilities and enhancing system security.
- Developed Cybersecurity tools and communicated actionable insights to strengthen threat detection and response.

FiberTechJo — Customer Support Intern

Dec 2024 To Present

- Supported technical teams in resolving customer issues efficiently.
- Demonstrated excellent communication skills to ensure customer satisfaction.

Amazon UK — Customer Support Associate

Aug 2023 To Jan 2024

- Delivered exceptional customer service in a high-pressure environment.
- Successfully navigated complex systems to address customer needs.

Self-Employed — Freelance Full-Stack Developer

Ongoing

- Designed and developed a full-featured restaurant website for One Piece, a restaurant based in Jordan.

Qbits — Freelance Full-Stack Developer

Ongoing

- Designed and developed a B2C, B2B, and internal management platform for Adawat, a Jordan-based company.

EDUCATION

Amman Arab University — Amman, Jordan

BS in Cyber Security | Graduated: 2026 | GPA: 3.54

CERTIFICATIONS & SKILLS

Certifications

- Certified in Cybersecurity (CC) – ISC2

- Blue Team Junior Analyst (BTJA) – Security Blue Team
- Cybrary Offensive Security Operations
- Splunk Fundamentals 1 (Intro to Splunk, Using Fields)
- Cybrary OSINT (Open Source Intelligence)
- Fortinet NSE 1 & NSE 2 Certified
- Microsoft Certificate in Networking and Cloud Computing
- Introduction to Critical Infrastructure Protection (CIP)

Languages

- Fluent in Arabic
- Fluent in English

Skills & Tools

- SIEMs (Splunk, etc.)
- Forensic Tools (Redline, Autopsy, etc.)
- Network Tools (Wireshark, TCPdump)
- Script Development (PowerShell, Bash)
- Coding Languages (C++, Python, JavaScript, etc.)
- Primary Stack: Python, React, PostgreSQL
- Full-Stack Web Development (Freelance projects)

PROJECTS

Detroit Axle

- **FAST** — An internal, cross-departmental tool built for company-wide use, supporting functions such as break/time tracking, customer support workflows, detailed sales visibility, and a scam-flagging feature built on transaction data from Braintree, among numerous other use cases. (fast.detroitaxle.com)
- **Detroit Axle QA** — An internal website developed for the Detroit Axle QA team, featuring multi-factor authentication (MFA) and hardened security controls.

Qbits

- **Qbits Solutions** — Designed and developed a B2C, B2B, and internal management platform for Adawat, a Jordan-based company.

Freelance

- **One Piece Restaurant Website** — Designed and developed a full-featured restaurant website for One Piece, a restaurant based in Jordan.

Personal / Open-Source

GitHub: github.com/Cipher-Red

- **Caeruleum** — A lightweight, open-source CLI tool that simplifies forensic analysis and system operations on low-resource Windows and Linux systems. Tested across both platforms, it empowers professionals and enthusiasts to efficiently investigate incidents and automate tasks, with 92 clones and 55 unique cloners on GitHub reflecting robust community adoption.
- **Vigil** — A Python-based, open-source tool for real-time network traffic monitoring and analysis on Windows and Linux. Tested on live networks, including a 6-hour analysis capturing actionable insights, it offers protocol identification, IP/port filtering, DoS/DDoS detection, and PCAP export, with 85 clones and 59 unique cloners on GitHub showing strong community uptake.
- **Aurum** — A Python-based, cross-platform tool for email validation, DNS record checks, and blacklist detection on Windows and Linux. Tested on over 500 emails, it provides bulk validation, custom blacklists, and PDF report generation, with 93 clones and 58 unique cloners on GitHub, boosting email security and deliverability.

PUBLICATIONS

“*Jamming and Anti-Jamming Techniques on Wireless Networks*” — Published on ResearchGate (Dec. 2024). This paper explores the vulnerabilities of wireless networks to jamming attacks and evaluates modern anti-jamming techniques to enhance network resilience.
